

ABSTRACT

Office is a place where there is a work activity that is carried out repeatedly, this activity becomes an activity of high intensity. The positive and negative impacts that the users of a room get are very much influenced by the given environment, depending on the feasibility of the work environment, it can be from physical or non-physical interior factors. A good interior will provide a good psychological effect for the users who use it, so they can achieve maximum productivity and creativity. Likewise for a model school interior where a good environment for the students is an environment that builds students' self-confidence. The interior can determine whether a person's performance is good or not from the results of the activities carried out in the room. With the concept of Life In Simplysity, it can create an interior that is efficient, organized, comfortable, and fancy that can improve the performance of workers, because the concept is related to the psychology of an office worker and a model school student. Elements such as color, material, light, space, safety, comfort, distance, and so on can be important points in the psychology of a room to get results from activities in a good room. The psychological design approach is the answer to the application of the interior with a focus on the psychological effects the user wants from the space created.
