

ABSTRACT

Samee Distro is a convection clothing retail company that was established in Bandung in 2017. Samee Distro is a business engaged in the sale of clothing. As for some of the problems that occur in this distribution, namely in the financial section, the recording of transactions is not in accordance with accounting standard guidelines, the recording is still done manually and has not been computerized, this makes the data not inputted properly and is vulnerable to damage or loss. The company also does not have a website to handle online sales that can expand the company's market share. This web-based application was built using the System Development Lifecycle (SDLC) development method, the waterfall method. This application uses the PHP programming language, Codeigniter Bootstrap Framework, and MySQL Database Management Systems (DBMS). The Black Box Testing (BBT) testing method is used in testing this web-based application. This application is able to handle the management and recording of clothing receipts, offline sales in distributions, online sales through online web stores, can produce journals, ledgers, stock reports, goods receipt reports and sales reports.
