ABSTRACT

Web-Based Application for Purchasing Merchandise and Consignment is a system that provides information services in the form of purchase transaction data for merchandise, purchase returns, financial reports and also information related to stock of goods. The existence of this application is important. In this case, DISTRO THE STAR ONE DOI *is used as a place of research, because the information system in the place of this case study has not been managed properly and errors often occur in making reports, such as reports on purchase transaction data, data processing goods, supplier data. The purpose of this study is to provide convenience when managing transaction data, minimizing errors in data processing. The results of the research are several academic and practical uses of information systems.*

The method used for data processing in this application is using the perpetual method, while the method for the development of this application is SDLC Waterfall until the implementation stage, and also the inventory method used is the First in First Out method.

Keywords: System, Information, Purchase, consignment
