

ABSTRACT

Roketin Company is a new startup in Bandung. While at work, the company uses an external application to assist the project manager in monitoring the progress of the application. But because there are some problem like developers's KPI cannot be known and the progress of the application is not known either. Making this application is done by prototype method because using prototype can make working faster. Additionally in the work required additional tools such as sublime for text editor, apache as server, and mongoDB as database. Hopefully the output of this Final Project can be a solution to their problems. Based on the results of the test, the application can help to find out the developer KPI and the progress of the application.
