

ABSTRACT

Belladona Copy Center, Bukittinggi City is a service company that acquires fixed assets without any details on fixed assets such as: acquisition price, date of acquisition, so that many fixed assets are not effective and when the company makes repairs and depreciation does not record so that the company cannot know the details of fixed assets. To overcome these problems, a web-based application was built that can manage the acquisition, depreciation using the straight-line method and repair of fixed assets. This application is built with object-oriented methods and SDLC development and uses the PHP programming language, Code Igniter Framework and uses Black Box Testing. This application has functionality for recording the acquisition, depreciation, and repair of fixed assets, making reports on acquisitions, repair reports, and fixed asset cards.
