ABSTRACT

Wages Production is one of company shoes which is operate in production and sales shoes. In this final project will produce an application to make inventory caculations and sales using Barcodes Scanner. In the company Wages Production almost all of the bussines activity is manually so it's retard it is own bussines. Sales transactions are still manual, that is, they still use notes which are then recorded in books. This manual process makes stored records sometimes missing. The inventory calculation applied to this application uses the FIFO. Besides this application also produces financial reports in the form of general journals, ledgers and trial balance reports. This application is created with Web Base and using waterfall method and the PHP programing language and MySQL. This application have 4 menu there are dashboard menu, master data menu, transaction menu, and report menu

Keywords: Wages Production, inventory, sales, FIFO method.
