*Creativity in material processing in the field of mixed media does not depend on materials that have been determined, but also on the ability to utilize materials that have the potential to be combined through various explorations in order to get maximum and satisfying results. It is not uncommon for designers to use crochet only as an accent and rarely use crochet as the main element in their collection, therefore a technique is needed that can balance the use between materials, based on the characteristic analysis of yarn acrylic and mesh fabric which have the same characteristics, namely strong and not perishable and can be used as an exploratory fashion product. This study aims to find new exploratory creations using mixed media and to provide uniqueness, additional artistic elements, and values different to a fashion product. The method used is divided into several stages, a series of material exploration processes, observation data collection, and literature study. The final product resulted from this research is a sheet of cloth with a technique with mixed media a 3-dimensional texture*

*Keyword: crochet, acrylic yarn, net fabric, mixed media*
