Tulle is fabric with net-like characteristics with a perforated surface so that it becomes a transparent fabric. The background of the research in this final project is telling how to process tulle as a fashion product using crochet technique because there has been no research that has processed tulle fabric using crochet technique before. The purpose of this research is to create yarn from tulle as an alternative new material and create an aesthetically pleasing sheet of fabric to be applied to fashion products. The method used in this study is a qualitative method, by collecting literature data by studying several written sources such as scientific papers, as well as online media portals. Then with the data collection observation method, the writer conducting online observations of several brands and observations about the types of tulle. Experimenting on tulle by using yarn design techniques and crochet techniques. Conduct online interviews about crochet and fancy yarn techniques. The benefits of this research are creating threads from tulle as an alternative new material, utilizing tulle to be made into fashion products with crochet techniques, and creating tulle fabrics for new aesthetic sheet fabric innovations. Therefore, the researcher succeeded in creating threads from tulle as an alternative to new materials and creating aesthetically pleasing fabric innovations to be applied to fashion products.
