Clinics are a health facilities that are evenly distributed in Indonesia. According to 2019 Indonesian Health Profile, there are around 9.205 units of clinic spread across 34 province of Indonesia. The current issue that is going on is Covid-19 pandemi. It is demanding the society to be able to adapt into the current situation. Based on the result of an analysis on the same level clinics, the problem that arose was the lack of facilities which can support the implementation of new normal. Therefore, it is necessary to design a clinics that is compact fo the implementation of new normal and can provide a sense of secure and comfort for the visitors during Covid-19 period. In ordered to overcome this, biophilics design is considered quite appropriate to bring the goals to reality. Biophilic design which seeks to unite humans with the natural enviroentment can provide a good stimulus that can provide a sense of comfort and can accelerate patient's healing process. The design implementation is expected to be the answers to the community's needs in clinics during the Covid-19 pandemic.

Keywords : Healthcare, Clinics, New normal, Covid-19, Biophilic design.
