

ABSTRACT

PT Artes Indonesia Raya is a group of artists and designers who create artwork for public and private spaces in two-dimensional and three-dimensional forms. One of the brands of PT Artes Indonesia Raya, namely UMA Design, has a mission to beautify the room by giving a touch of human hands in it and carrying the space odyssey concept in its visualization. One of the collections that is in great demand by the market is indoor decoration products, namely plant pot. Therefore, the author tries to explore the dye in resin material, then applied to the room decoration product, namely the set of plant pots. This aims to provide an alternative dye that can visualize the space odyssey motif into a room decoration product. The research method is a qualitative method with an experimental based action research model. The purpose of this method is to obtain the uniqueness and characteristics of each dye based on the form of treatment given to the resin material.

Keywords : Dye, resin, decoration product
