

ABSTRACT

Technological developments also have a major impact on the world of education today. SMAN 17 Garut is one of the public high schools in Garut City. In its own learning system, the school has used online media such as Edmodo, classroom, and the like to carry out teaching and learning activities. However, each teacher at the school still uses different media because they feel comfortable with the media they use. As for a problem that occurred at SMAN 17 Garut is related to the student learning system. Where, students find it difficult to access materials, assignments, and grades from each teacher because each teacher uses different media. Based on these problems, an application is needed that can later help manage materials, assignments, and student grades centrally. With the creation of this application, it is hoped that it can help the school in managing learning centrally and make it easier for the previous system that was still conventional and switch to this designed application system.

Keywords: Student, Media, and Learning System.
