ABSTRACT

E-learning is an education system that uses electronic applications that support the development of teaching and learning activities using the internet or other computer network media. At SMK Negeri Jatipuro the teaching process is still manual. This program was created using the PHP Codeigniter programming language with the Mysql database. The results achieved in making this e-learning are to facilitate the teaching and learning process without being tied to time and place. With this e-learning, it is hoped that students can download material and do assignments and exams online and efficiently. The conclusion with this e-learning is that it makes learning easier between teachers and students.
