ABSTRACT

CV Palaguna is a company engaged in the sale of tools and building materials such as cement, sand, gravel, steel frames, gypsum and other building accessories. With the development of sales and the number of products sold by the company from year to year, recording information becomes increasingly difficult and complicated. Current company data storage is still done manually, this makes it difficult to share information between employees within the company, data that is not up to date and not periodically, difficulties in data retrieval, data transmission and data storage. Therefore, the development of the Inventory System application can help CV Palaguna in solving these problems. This application development uses the Rapid Application Development (RAD) development method and the Stocky application as a Content Management System (CMS) which provides many customization options to personalize CV Palaguna's business processes.
