

ABSTRACT

The mineral water refill shop is common for society. However, in this technological era is needed a system to make it easy transactions refilling mineral water. One of them is by utilizing QR Code technology at a mineral water refill shop based on the Arduino UNO microcontroller as a controlling medium. By utilizing QR code technology, it is expected to automate mineral water refill. The system can automate mineral water refill and can automate mineral water refill based on QR code scanned on GM67 1D/2D scanner

Keywords: QR Code, Arduino UNO, Microcontroller, GM67 1D/2D scanner.
