Abstract – The orphanage is a place of hope to support foster children to grow and develop properly and prepare them to enter the community. Orphaned children are also the nation's children who are useful for the future. A bright future is determined by what is planted today. To produce it all, children need the support of activities, facilities, and the environment to support their growth and development. However, there are still many orphanages available that do not have facilities that are less supportive of the comfort of children and the surrounding environment so that they do not feel the support to take on a bright future. Central Java has the highest percentage of poverty on the island of Java. The selection of the poverty factor because it can affect the level of education a child takes and the number of neglected children in an area. The Green Design approach is taken by considering several factors, including the vision and mission of the orphanage to introduce nature and is also useful for creating the future of children who, apart from excelling in their field of work, can also excel in saving the environment in the future. This design can be used as an example of an orphanage that applies green design by prioritizing non-formal education to achieve a good future.
