

## ***ABSTRACT***

*Church is a place where Christians can worship on important days for Christians. In addition to worship, the church is usually used to pray together, to practice music for worship accompaniments, to dance exercises for tambourine dancers who accompany the praise. During the COVID-19 pandemic, the church needed some adjustments to adjust to the rules applied by the government in holding worship. At GBI Graha Bethany also had to adjust to the existing rules because of the Lippo Cikarang area. This church has 5 worship rooms that have different functions and different congregations in each worship room. The differences in the church groups are based on the age of the congregation. So, the design that will be applied is a design that can adapt to the age of the congregation who use the worship space. In addition to adjusting to the age of the congregation, the design of the worship room will be adjusted to the function of the worship room. The prayer room will be designed according to the COVID-19 protocol that has been implemented by the government. The final design is expected to give the congregation a sense of comfort in worship and also provide a sense of solemnity during the service.*
