ABSTRACT

Barokah Furniture is a business place engaged in furniture to provide to customers. Because of the large inventory of goods, the procurement of goods and goods sold still uses a manual system, which is written in a ledger, Barokah Mebel is difficult in managing goods in a shop. This application has several features, such as recording the procurement of goods that enter the store, recording every transaction of goods sold and managing stock items using a web-based application. This application was built using the PHP programming language and using MySQL for the database. With the completion of this application, it is expected to facilitate Barokah Mebel in managing goods and reports on procurement and sales transactions with this web-based application.
