ABSTRACT

The development of information technology today is very fast, it can be seen from the easy access to information in a matter of a few moments. However, the development of this technology can be said to be uneven in Indonesia. For example, the reporting of village funds in the area still uses the manual method, namely by printing billboards. This billboard printing is intended for transparency in the use of village funds to the community. From this, it is necessary to have innovation in reporting and monitoring in the use of village funds using a mobile application.

In this final project, research has been carried out for the development and implementation of a system that can help oversee the management of village funds. The system built is an Android-based mobile application. This application displays information about data on the use of village funds in Central Buton Regency.

The results of this study are in the form of a Village Fund Dashboard application designed to facilitate monitoring of village fund management, transparency in the use of village funds and help improve digital infrastructure in Central Buton Regency.
