

ABSTRACT

The Library and Archives Service (DPK) of South Sulawesi Province consists of the library and archives sector which carries out operational activities and public service activities. These two activities basically have different functions and properties so they are placed separately. However, in fact, the transfer of functions to the operational office of the South Sulawesi Province DPK library has not adjusted to its main purpose as an operational office in the library sector. In response to this, it is necessary to seek and review the design of the Operational Office for the Library Sector. Thus, the purpose of this design is to see how the Operational Office for the Library and Archives Service (DPK) fulfills the role of a government office by implementing an appropriate space user activity approach so that work performance productivity is more effective and efficient. In collecting data, this design uses the methods of observation, interviews, literature studies and comparative studies. As for the design, using programming methods, themes and concepts, and the final result is the output of the design.
