

ABSTRACT

The use of industrial themes in the style of buildings and interiors became one of the favorite themes for coffee shops in Bogor City. One of the coffee shops that implement the industrial theme is the Sisi Barat Coffee. This shop provides facilities for the storage of goods (helmets) for visitors, but this facility cannot be supervised and easily fall. On the other hand, the shop does not have the facilities to store umbrellas and raincoats when the Sisi Barat Coffe is hit by rain. So many visitors prefer to store their luggage (helmets, umbrellas, raincoats) in other facilities whose intensity of use is higher. The purpose of this design is to design a storage area that can be supervised, effective, and efficient in the Sisi Barat Coffee area. This design takes into account the results of observations, interviews, and questionnaires. The recommendation from supporting theory and field studies is a storage area for goods combined with bench facilities. This design only discusses the concept of storage of goods. This design is expected to minimize the problems on the Sisi Barat Coffee.
