

ABSTRACT

At this time to facilitate various types of transactions at restaurants, there are many types of payments that can make transactions easier, namely one example of making it easier to make payment transactions via online by applying the payment gateway method by making non-cash payments through various types of digital wallets such as OVO, Gopay. , Funds and so on. So that customers get convenience in making payment transactions, namely through non-cash payments. In addition to using the payment gateway method at restaurants, customers will be more interested if they can see the status of the food orders that have been ordered. The status of the food order required by the customer is more or less wanting to know whether the food ordered is already in the manufacturing process or finished. So by applying the status of the food that can provide information about the status of the food and also the non-cash payment system, namely the payment gateway, it will make the payment transaction process easier.
