

ABSTRACT

Light pollution is a problem that needs to be addressed in this era where the use of artificial light is increasing along with the development of residential areas. However, in Indonesia as one of the countries with the largest population in the world, the problem of light pollution is still getting less attention from the public. Light pollution has a negative impact on everything from astronomical observations to its impact on wildlife ecosystems, human health and energy wastage. This is the background of research to design children's illustration books about the impact of light pollution. This study aims to provide education and awareness about light pollution, especially for children, from the causes, impacts, to how to overcome it and foster a sense of care for the environment. In this study used qualitative methods, namely interviews, literature study, and questionnaires which will then be analyzed using the matrix analysis method. With this design, it is hoped that it will increase the awareness of Indonesian children, especially on light pollution and preserve the environment for the future.

Keywords: Illustration Books, Light Pollution, Educational Media, Children.
