

ABSTRACT

A waste bank is a container or garbage collection place that has been taken from a small garbage collection place and put together in a place that collects the garbage which will then be selected, sorted, weighed, recorded and will be sent directly to the collector or large-scale plastic waste processing industry. The problem of plastic waste experienced by the community today is very complex, and the lack of public awareness of the impact of plastic waste that will be produced. Processing plastic waste into alternative materials is a way to recycle waste into something that has economic value or is useful. Recycling plastic waste into fashion accessories is one alternative to the many waste processing that has been done by researchers before. This is one way to deal with plastic waste that pollutes the environment. Bank sampah bersinar (BSB) becomes an organization that does things that care about the environment by collecting, sorting, weighing and forwarding plastic waste to the collecting party or the plastic waste processing industry. Recycling plastic waste into fashion accessories, earrings and necklaces is the purpose of shining waste banks in order to process their own waste, this is because the shining waste banks (SWB) see the potential they have is very large. Therefore they work together with researchers to be able to find the right way that will be applied in the processing of plastic waste into small-sized products, therefore researchers and the waste bank agreed to make earrings and necklace fashion accessories that will be able to be applied in the future.
