

ABSTRACT

Vehicle washing service is the process of cleaning the vehicle carried out by a vehicle washing service or an individual. Vehicle washing methods at this time still use manual methods or have not used tools such as computers and databases. Manual washing is done by washing the vehicle with water after the vehicle is wet, it will be sprayed with washing shampoo and then the surface of the vehicle is rubbed so that the dirt on clean vehicles is the most widely used method in Indonesia, which is based on 90 percent of both individuals and vehicle washing services. long enough of course I am less efficient and do not save time. The method proposed in the vehicle washing service is to use a more modern method where users can make reservations without having to come to the washing location and make bookings from home using the features provided by the website. This application development uses SDLC prototyping with system requirements analysis, system design, implementation of unit and test, interaction and system test and operation and maintenance. The language used in the development of this application is hyperText markup language for the display interface, utilizing MySQL as a place to store data. Program testing is done by means of Black Box Testing to ensure the quality of the functionality goes well.
