ABSTRACT

ENGGRES is an application for learning English (speaking & vocabulary) specifically for students in grade 6 Elementary School (SD). The ENGGRES application is motivated by the role of administration in charge of managing data for teachers and students who will carry out learning. Various obstacles also arise when administrative officers carry out their duties. Such as: it takes a long time to collect teacher and student data because it is done manually, it takes a long time in dividing student classes and the last is the collection of learning summaries by so many teachers that it takes a long time to recap. From these problems, the author came up with an idea to create an English learning application (speaking & vocabulary) for elementary school students (admin module). The purpose of making this application is to facilitate admins to assist in creating user accounts for teachers, students and admins, managing student classes and managing student material themes. The method used in making this application is the waterfall method. The programming language used to build this application is the PHP CodeIgniter framework, and the database used is MySQL. The application is expected to help teachers and students in the process of teaching and learning English.

English Keywords: English Learning, Students, Teachers, administrative officer.
