Jl. Telekomunikasi No. 1, Terusan Buah Batu, Sukapura, Bandung, Jawa Barat 40257

The Surabaya City Public Library is one of the public facilities provided by the government for Surabaya City residents as a means of education and a source of information. The strategic location of the library in Surabaya City Square can be a public facility that can become an educational center in the city of Surabaya. However, the fact is that the Surabaya City Public Library that currently exists does not meet the requirements of national library standards and has minimal facilities compared to other government public facilities. In response to this, it is necessary to seek and review the design of the Surabaya City Public Library. That way, the goal emerged to redesign by looking at how the Surabaya City Public Library operates for now and develops it into a Public Library that has renewable facilities with the smart library concept so that it can become a more effective and efficient library for the citizens of the City of Surabaya. In data collection, the design uses observation, interviews, literature studies, and comparative studies and for design, uses programming methods, themes and concepts, and the final result is the output of the design.

Keywords :*Redesign, Public Library, Smart Library.*
