

ABSTRACT

Co-Working Space is a joint work area that puts forward the concept of an open workspace and is equipped with work facilities that are now widespread throughout Indonesia, one of which is Ruangsit.co which is a co-working space located in the city. from Bandung. The work desk is the main facility in the CoWorking space which is equipped with additional storage space for storing work tools. However, in the Ruangsit.co Co-Working space, they still use a work desk that does not have a storage function or storage area so that it can interfere with the comfort of visitors in their activities. The purpose of this design is to produce a work desk product to support the convenience of visitors in the Co- Working Space ruanguat.co by using a qualitative method approach that makes it easier for users because on the work desk there is adequate storage space in the appropriate position based on functional aspects, so that it can be a solution to existing problems.

Keywords: Co-Working Space, Workbench, Storage
