

ABSTRACT

Hijab is the main need for Muslim women to cover their genitals and start daily activities. Initially as a medium of clothing and also as a tool to dress according to the needs of Muslim women (Life Hijab which used to function as a style) is now a lifestyle and trend for Muslim women (lifestyle). In 2020, so many hijab users in Indonesia have achieved a very large increase, due to the increasing number of hijab users, it is necessary to have a place that can accommodate a large number of hijab and its accessories, because previously the hijab storage area was made of iron or metal hangers. plastic and not covered, therefore the author hopes in this design to help Muslim women when arranging the hijab and its multifunctional accessories in order to prioritize tidiness and cleanliness.

This design uses qualitative methods by conducting observations and conducting interviews to obtain data, this design process also uses the SCAMPER method, namely combine and modify because this design combines and modifies existing products. This product will be placed in a decorated room or room, this design is expected to meet the needs of hijab users who have a large number of hijabs and accessories.
