

ABSTRACT

Rumah Pelangi Community is a community that focuses on providing education to street children. Rumah Pelangi Community itself already has a social media account to provide information to many people, donation information, and also social media accounts are still lacking to provide information related to the community itself.

Based on these problems, a website-based information system will be created to make it easier for Rumah Pelangi Community to disseminate information with program features, community profiles, galleries, vision-mission, history, organizational structure, donations, contact us, financial reports. used is PHP with Laravel framework and the database used is MySQL. This website is expected to help the Rainbow House Community in providing information to those who need it to be more interactive, efficient, and also provide benefits and also make it easier to provide information.

In the results of testing using the Google Lighthouse software, the score was very good at 94. The results of the questionnaire by the respondents as many as 53 people got a good score with an average value of 5. Meanwhile, the Mean Opinion Score (MOS) for community members got 4.7 and the general public got 4.6.
