ABSTRACT

Along with advances in technology, the need for accurate and precise information in good data management has become a necessity for many agencies, one of which is in managing Final Project data. The Final Project is a scientific paper prepared by students in each study program, especially the D3 Information System study program based on a thorough discussion of a problem with the guidance of a supervisor. Here I made a final project with the title "Final Project Apprasial and Documentation". The purpose of this Final Project is to find out how difficult it is to write the data in the process, know the constraints in writing data before the application, make it easier for Lecturers and Students to write final project data, make it easier for Lecturers and Students to find the data needed in the project End. The method used is the waterfall method.
