

## ABSTRACT

---

*This Final Project aims to develop several features on Borrower Website at Agree Modal. Due to poor web responsiveness, farmers who are the main users of this website have difficulty accessing Borrower Website because not all farmers have computers/laptops to access it properly. Therefore, in this Final Project, a more responsive to any device screen size Borrower Website front-end has been developed. In addition to increasing web responsiveness, this Final Project also discusses about development of Financial Report feature that can be accessed by farmers to track their capital finances. In the process of developing this Borrower Website, the author uses Scrum as a framework.*

*Keywords: Responsive Web, Financial Report, Scrum.*
