The drawings picture of children aged 7-9 years is a periodization of the picture period of the chart which has the characteristics of having a story atmosphere, has started to detail and resembles its original form, there are stepping lines, repetition and so on, these characteristics make pictures of children aged 7-9 years interesting to process. with the science of craft and fashion, namely in making motifs. In previous studies, the processing of children's images into motifs and processed into fashion products has been carried out using batik techniques, and digital printing. This creates the potential for processing children's images with other techniques, and what will be used in this research is *block printing*. The choice of *block printing* technique is because it has the same characteristics as children's drawings, namely imperfections, and uneven coloring. This research is curious with the aim of making motifs inspired by pictures of children aged 7-9 years using *block printing* techniques on sheets of cloth and realizing them as fashion products. with the research output of making a composition of motifs that will be applied to sheets of cloth, *block printing* plates and fashion products.
