The exploration of motifs continues to develop, as is the case with one of the fashion industries in Indonesia which has responded to the development of motif exploration, namely UKM LORI. Currently, UKM LORI is in need of developing a modular form that is inspired by local batik motifs. UKM LORI produces fashion accessories with a modular system by combining various modules. The same is the case with the potential development of the Paksi Naga Liman batik motif to be applied in the form of fashion accessories with a modular system. This statement can be studied using qualitative methods, namely data collection from literature studies, product observations at UKM LORI, interviews with owners of UKM LORI, exploration of the development of the Paksi Naga Liman batik motif and its application to fashion with a modular system. The purpose of this research is the development of a modular design from the Paksi Naga Liman batik motif into the form of fashion accessories with a modular system at UKM LORI by using materials on mirror gold.
