

ABSTRACT

The current era, technology is developing very rapidly. Where with the development of technology can make it easier for humans to do things. One example of technological developments is in information systems both in the form of websites and mobile applications that are widely used in various fields, one of which is in the field of education. RA Alhidayah Logam Bandung is one of the educational institutions which in processing school payments and financial reports in the form of incoming and outgoing money is still using the manual method which is recorded in a book.

Therefore, a financial report application was designed that became a solution to this problem. Where the financial report application that is made is divided into 2 parts, namely the website and the mobile application. The website section can only be accessed by admins. Where the admin can edit, delete, and add data. The mobile application section can only be accessed by the user (parent/guardian). Where in the user section can only see details of payment history and make school payments.

In the design of this financial statement application, functional testing was carried out, where from the test it was found that all the features in the application can run well and the application can be used.

Keywords: *School payments, financial reports, website, mobile application*
