ABSTRACT

Administrative services are services related to general administration and staffing services, financial services, as well as services related to evaluation and reporting, services related to archiving, housekeeping, management of goods, public relations, libraries and services related to administrative efficiency. Diskominfo Tasikmalaya City administrative services include 18 types of administration, among others, which are the focus of this Final Project: Correspondence Administration, Personnel Administration, and News Administration. In its implementation, the administrative management is still done conventionally using paper.

In this final project, web development for the three administrative services above is carried out using the Laravel framework as a framework used to develop websites, MySql database as a data manager, JavaScript as an account login, and PHP as a liaison between the Laravel application and the database.

The test results show that the service web page gives the results that it can display the service web properly. Furthermore, from the user login test and the Head of Sub-section, it gives the results that you can login according to the user account rights and the sub-section's account rights. Furthermore, the results of the feature test show that the service features can run well.
