ABSTRACT

Web-based goods lending application at SMAN 23 Bandung to minimize loss of goods. At SMAN 23 Bandung, the data collection process is still done through books. The program is created using the PHP CodeIgniter programming language with a MySQL database. The results achieved in making this application is to make it easier to record goods by warehouse employees. With this application, it is hoped that employees can record goods accurately

Keywords: lending, application, loss, goods
