

ABSTRACT

Community Service is a routine of development and regional renewal in each village on the basis of the will of the majority of the residents themselves either spontaneously or planned, but the use of media currently used still has shortcomings so that it is considered ineffective and efficient in carrying out the activity process. community service. Because the application is intended and only has the main function to chat. Therefore, this final project will discuss the design of the User Interface of an independent community service application, this User Interface modeling will use the Goal Directed Design (GDD) method with the output of a high fidelity prototype. This application will be tested for its usability level using the System Usability Scale (SUS) method.

Keywords: User Interface, Community Service, GDD, Usability, SUS.
