Early childhood education is an education that can assist in an optimal development in children as its aim is to help develop various aspects of the child as well as their potentials such as cognitive, motoric, psychological, physical, artistic, language, emotional, and their independence, specifically targeted at children from birth until the age of six. Early education is held because preschool age is an important period in a child's life, also known as their golden period for them to learn and absorb all information that is around them and is given to them. With the increase in parent's knowledge related to the importance of early childhood development, as well as the increase in interest of putting them in an early childhood education, it is important to design a kindergarten and daycare that pays attention to their developmental aspects and provide facilities that are educational and recreational, according to their ages, as children will be the main users. This research uses qualitative methods in the form of a survey to a place for a comparative study. The analysis carried out are based on the analytical result of the precedent study, comparative study and standardization data of kindergartens and daycare.
