ABSTRACT

SPK Police Service Center is a service that is tasked with providing police services in the form of reports / complaints from the public, providing assistance and assistance, and providing information services. Bandung regency, West Java. Some of the management of the letters include the making of SKCK, loss reports and crowds of licenses. Currently the police station does not yet have an application that can handle this through Android. Therefore, an application designed that can make the public SPK does not need to have to come to the police station so that the police station is easy to do printing and handling in the above. The method used in application development is the waterfall method, while for application design using the Unified Modeling Language (UML). The application built is an android-based application that uses the Java programming language and the database used is MySQL.
