

ABSTRACT

This final project background by the delivery of information about the Sindangjaya village which still uses WhatsApp which makes it difficult to find the information because other messages are buried, the submission of application letters to the Sindangjaya village which is still done manually and repeated writing in community data. The problems discussed are how to make it easier for people to find news and information about the Sindangjaya village, how to make it easier for people to apply for letters online and how to make it easier for RTs to collect community data without rewriting all the data. The purpose of building an application that can display information, submit an application letter online, store public data and send documents online. Based on the results of the discussion, it was found that the application that we built can make it easier for the community to submit application letters, find information about the Sindangjaya village and send community data without repeating data writing.
