

ABSTRACT

Toserba Margo Mulyo is a multipurpose store which is located at Jl. Gudang Garam, Dsn. Jombang, Sratujejo Village, Kec. Baureno, Bojonegoro, East Java which is engaged in trading. This Margo Mulyo shop is one example of a market that has used technological advances in its assessment where this shop sells various kinds of needs such as household needs, basic necessities, cosmetics, baby equipment, etc. In carrying out the process of recording the payroll of this store using data from the current fingerprint attendance as a reference, it has not given maximum results, the calculation of salaries in this department store refers to the number of presences. Therefore, this application was made to handle employee payroll, as well as employee salary deductions. The preparation of this payroll system begins with a system requirements analysis process, followed by a design process based on the results of the analysis. The latter performs the process of implementing the system design into an application system, using the PHP and SQL programming languages. The result of this research is a web-based employee payroll application system. Information obtained from this system is employee personal data related to attendance, payroll, salary reports and salary slips.

Keywords: Payroll, Presence, Margo Mulyo Department Store.
