

ECONOMETRICS ANALYSIS

- NEW An increased number of examples using real data sets, with extensive analyses worked out from current literature. Applications and examples from Economics, Finance, and Political Science
- NEW- Chapter 9, on large sample results and alternative estimators for the Classical Regression Model
- NEW- Chapter 17 and 18, thoroughly revised to reflect current trends in time series analysis, including frequency domain and long term memory models
- NEW- A greater emphasis on nonlinear models, including full chapters on nonlinear regression and nonlinear optimization
- FREE STUDENT-VERSION OF LIMDEP with the text! Packaged in the back of the text the students realistic data sets and challenging empirical analyses as a routine part of their econometrics training. Also included, complete computer solutions for the examples in the text
