

## **ABSTRACT**

in this final project, we will discuss improving the quality of education in the Qur'an through the digitization method. Currently, there are more and more cases of sexual harassment, especially religious education, circulating and legalizing society. Since the last 2 years, many religious education have also been closed due to the Covid-19 pandemic, and have been forced to carry out the learning process online, but many of them do not have alternative media to convey information and learning. This final project aims to design a web information system tpa using php and mysql programming languages. To overcome these problems, the author uses a system development, namely the Software Development Life Cycle (SDLC) with the Waterfall method in designing information systems, starting from analyzing software needs, design, implementation, and testing. The results of the design are disseminated using google form. Based on the results of the tests and surveys it can be concluded that this application has been running quite well.
