ABSTRACT

Technology is developing very dynamically and rapidly, technological progress in any case continues to grow. Innovation appears continuously and never ends, but some people still turn a blind eye to the use of technology, especially the internet. Writing this Final Project aims to help solve problems in booking meeting rooms by designing and creating a website-based system. The author takes the object of research about booking a web-based meeting room, using several programming languages such as PHP, Javascript, HTML and others. The system has been well designed and has been running according to its function and it is hoped that this website will be useful for the needs of booking meeting rooms.
