

ABSTRACT

The score processing imposed by Az-Zamir Islamic High School still uses manual processing. However, there are some obstacles faced such as manually inputting values through Microsoft Excel which makes data collection less organized. This case detrimental to the students and parents, because the data received is very slow which results in the distribution of report cards being hampered. There are four login accesses that start from the admin acting as managing data. the homeroom teacher acts as the process of inputting extracurricular activities and student attendance as well as printing report cards. the teacher acts as an input for the student's report card score. and the guardian acts as a user who can see the results of the score. In the process of making this application, it uses codeigniter, Sublime Text software as a medium to create layouts of sites that have been designed, PHP as the programming language, MySQL as the database server, and Browser.
