

ABSTRACT

Student organizations and communities are a forum for students to develop their interests and talents outside of lecture hours. Telkom University has TAK points system (Transcript of Student Activities) that requires its students to collect TAK points in accordance with the provisions, TAK points can be obtained by participating in various activities or events organized one of them by the organization or community of students. However, the system used to share information about events organized by student organizations and communities at Telkom University is still less coordinated. Therefore, a web-based application has been built using the CodeIgniter(CI) framework, which is accompanied by information about events organized by student organizations and communities. This application will be created in the form of a social networking platform that provides information features of student organizations and communities, events, etc.
