

ABSTRACT

Student communities and organizations are means that are formed to facilitate student activities outside the classroom used for a means of sharing information, discuss, practice organization and can also be used as a place to socialize between students. During this time of the corona virus pandemic, all activities at Telkom University must be stopped, thus hindering all existing activities within Telkom University one of which is organizational and community activities. As a result, organizational and community activities are not running smoothly, such as it is difficult to determine meeting schedules and difficult to hold meetings due to obstacles in determining the meeting schedule. To help the internal activities of organizations and communities at Telkom University, then a Platforms in the form of social networks has been created that can assist the internal activities of organizations and communities that is web-based and built using the CI (Codeigniter) framework and MySQL database, This platform has also been tested using black box testing. It is hoped this platform can be used to assist in managing the internal needs of organizations and communities.
