

LIST OF FIGURES

1.1	The illustration of extended communication between MCRBS between UAV linked to the victims due to the obstacles.	1
2.1	Fundamental structure of channel coding.	7
2.2	Channel polarization Polar codes.	9
2.3	Fundamental Polar codes encoder with $N = 2$ in (2.10).	10
2.4	Fundamental encoder Polar codes for $N = 4$	11
2.5	Fundamental decoding block Polar codes.	12
2.6	List decoding for Polar codes $N = 8$ with $L = 4$	13
2.7	A process of puncturing of 8-bit block with a puncturing pattern $P=[00111111]$ resulting a 6-bit block.	15
2.8	A process of puncturing of 6-bit block with a depuncturing into a 8-bit block.	15
2.9	multikernel construction Polar codes with $N = 6$ and $G_6 = T_2 \otimes T_3$	16
2.10	Fundamental T_3 block of multikernel.	16
2.11	Performance of bit-error-rate theory of AWGN and Rayleigh fading channels.	20
3.1	Transmitter and receiver structure with Polar codes for communications between MCRBS and UAV.	21
3.2	The illustration of extended communication between MCRBS and UAV.	22
3.3	Measure of polarization performance for different G_3	28
3.4	Kernel matrix of hybrid multikernel G_{3S} and G_{3L}	29
3.5	Hybrid multikernel-constructed Polar codes with $N = 6$ and $G_6 = T_2 \otimes T_3$	29
3.6	Flowchart of the proposed process coding technique of Polar codes.	32
4.1	The performances of hybrid multikernel with the proposed decoding under AWGN channel.	36
4.2	The performances of length 54 and 64 bits under AWGN channel with Rate 0.3.	37

4.3	Hybrid multikernel with the proposed decoding and the single kernel Polar codes with block fading length of 54 under block Rayleigh fading channel.	38
4.4	Hybrid multikernel with List decoding under AWGN channel.	39
4.5	Hybrid multikernel with List 8 and CRC-4 under AWGN channel.	40
4.6	Hybrid multikernel and the single kernel Polar codes rate 0.33 with List 8 and CRC under AWGN channel.	41
4.7	The List size of 8 for blocklength 54 and 18 for hybrid multikernel with the proposed decoding and the single kernel with block fading length of 54 under block Rayleigh fading channel.	42
