

ABSTRACT

A restaurant is a commercial business that provides food and drink services to the public and is managed professionally with the aim of seeking profit and satisfaction for guests. At this time, almost all data can be accessed or stored online through an application. Resto Point of Sales application is a system used to carry out retail sales transactions, booking tables and delivery. The purpose of making this application is to make it easier for customers to order food also make it easier for managers to process transaction data. This application is built using the PHP programming language, with the CodeIgniter framework and using a MySQL database. The method of application development uses the Waterfall methodology.

Keywords: Restaurant, booking, delivery.
