ABSTRACT

Bandung has a lot of tourism potential such as natural tourism, religious tourism, cultural tourism, and culinary tourism. Currently tourists have difficulty finding information about attractions in Bandung, tourists also do not know what news and events are currently taking place in the city of Bandung. Tourists are also having trouble finding the latest tourist attraction in the city of Bandung. To overcome this, the application of a web-based information system as an appropriate step in providing tourist information in the city of Bandung. The tools used in this Final Project are Use Case Diagrams, Activity Diagrams, and Class Diagrams, the analysis used in making this final project uses the Waterfall method. This final project has produced a web-based tourism information system application that serves to provide tourism information in the city of Bandung.

Keywords: Application, Tourism Information, City of Bandung, Web.
